Summary: Virus-inactivating properties (virucidal activity against enveloped viruses) of Bacoban WB of ROPIMEX R. OPEL GmbH according to EN 14476:2013+A1:2015/prA2:2016 under dirty conditions

This summary is based on the following test report of Dr. Brill + Partner GmbH for the surface disinfectant Bacoban WB produced by ROPIMEX R. OPEL GmbH:

modified vaccinia virus Ankara test report (L19/0102aMV.2) dating 26/03/2019

The following concentration and exposure time are necessary for the inactivation of the test virus:

1.0 % 5 minutes

in order to achieve a 4 log₁₀ reduction (inactivation ≥ 99.99 %) under dirty conditions in a quantitative suspension test according to EN 14476:2013+A1:2015/prA2:2016.

After evaluation with modified vaccinia virus Ankara the surface disinfectant Bacoban WB can be declared as having **"virucidal activity against all enveloped viruses"** according to EN 14476:2013+A1:2015/prA2:2016.

The declaration **"virucidal activity against all enveloped viruses"** covers all enveloped viruses (Annex A) like HBV, HCV, HIV and Ebola virus.
