

FARMING & VETERINARY

Bacoban let's you take control over cleaning and disinfection of surfaces that have been in contact with animals and poultry.

Bacoban effectiveness has been tested and certified up to 10-day. A breakthrough for animal handling facilities including equine care, cattle breeding facilities, livestock, dog kennels, vet practices and for pet owners.

Can part of a regulatory farm animal disease control protocol. Disinfection with a certified residual effect to help keep under control transmission of infectious diseases.

Bacoban can Reduce odors by eliminating bacteria.

Bacoban will help in the control of pathogens growth and cross-contamination.

Ideal for hard surface disinfection in veterinary practices, veterinary hospitals and laboratories e.g. Floors, walls, tables, doors, handles, veterinary equipment, kennels and animal shelters.

Its unique nanotechnology layer creates an easy-to-clean disinfected surface and helps reduce odors from animals including urine and faecal on surfaces.

Bacoban water-based formulations is a safe “cleaner and disinfectant” in areas where chemical residues must be avoided.

The New Dimension in Infection Control

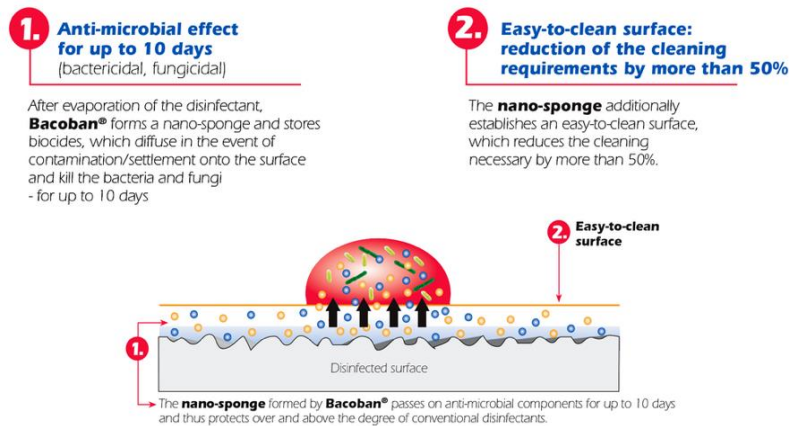

Bacoban's advanced nano-based formula provides the needed protection over microorganisms on all surfaces and helps maintain animal health.

Cleaning and disinfection of surfaces that have been in contact with animals is a vital element in controlling bacterial and viral diseases.

Why Bacoban?

- One step cleaner and disinfectant.
- SiO₂ protective coating offers an easy-to-clean solution to non-porous surfaces. By reducing the surface energy, soiling and other surface contamination loosely adhere to the surface allowing them to be easily removed.
- Reduces cleaning time by up to 50%.
- The sol-gel process is used to produce Bacoban's semi-permanent nanoscale sponge layer that stores anti-pathogen agents which remain active for up to 10-day protecting surfaces against new contamination of viruses, bacteria and fungi.
- This nanostructured, ultra-thin SiO₂ layer is important for modifying the surfaces of substances and products, to improve existing usage properties and extend product life.

A through pre-disinfection procedure is an important factor that determines the effectiveness of the outcome.

Bacoban – A one-step advanced Cleaning and Disinfection solution

- Can be incorporated into your protocol and can become your complete regulatory disease control program
- Reduces odors
- Prevents pathogens and cross-contamination
- Suitable for general disinfection performed on farms, stockyards, exhibition grounds, zoological parks, abattoirs, poultry, fish farms and food processing plants

- The cleaner and disinfectant of choice for surface disinfection in veterinary practices, veterinary hospitals and laboratories. For most surfaces: floors, walls, tables, door handles, veterinary equipments, kennels and animal shelters
- Bacoban proven up to 10-day protection against a wide range of pathogens
- Its unique nanotechnology layer creates an easy-to-clean surface for smooth removal of urine and faecal odors
- Bacoban Water based formulations are suitable in areas where chemical residues must be avoided
